QUEEN'S COLLEGE, GALWAY.

FOUNDED A.D. MDCCCXLV.

———◆———

FOUNDATION AND CONSTITUTION.

THE Colleges of the Queen's University were founded under
the provisions of the Act 8 and 9 Victoria, cap. 66, intituled
" An Act to enable Her Majesty to endow new Colleges
for the Advancement of Learning in Ireland." Under the
powers given by this Act, it was determined to found three
Colleges. Belfast, Cork, and Galway were selected as their
sites ; and on the 30th of December, 1845, Letters Patent
were issued incorporating them under the name and style
of " THE PRESIDENT, VICE-PRESIDENT, AND PROFESSORS OF
QUEEN'S COLLEGE, [BELFAST, CORK,] GALWAY.

The Colleges were opened for Students on the 30th
October, 1849. The Presidents and Vice-Presidents of the
Three Colleges constituted a Board of Government till the
foundation of the Queen's University in 1850. By the
University Education (Ireland) Act of 1879 provision was
made for the foundation of the Royal University and the
dissolution of the Queen's University, within two years
from the date of the Charter of the Royal University. All
Graduates and Matriculated Students of the Queen's Uni-
versity at the time of dissolution became Graduates and
Students of the Royal University, and all existing Professors
of the Queen's Colleges continued to be University Pro-
fessors. The Charter of the Royal University was granted
on the 27th of April, 1880, and the Queen's University was
dissolved on the 3rd of February, 1882.

B

COLLEGE BUILDINGS.

THE College, erected in 1848, is situated on the west side of the River Corrib, which divides its grounds from the town of Galway. It is built of cut limestone from the neighbourhood, in the form of a quadrangle. The style is Gothic of the 14th century. Over the principal entrance facing the town is a clock tower, 108 feet high. The private residences of the President and Registrar with the Examination Hall occupy the west side. The Library, over 130 feet in length, extends along the first floor of the north side. It contains upwards of 35,000 volumes in the various departments, to which constant additions are made of the most recent standard works. Beneath it are the Drawing school and Lecture rooms of the Engineering department, the Pharmacy Laboratory, the Mathematics and Modern Languages Lecture rooms. Corre- sponding to it on the south side is the Museum of Natural History, under which are the Laboratory, Museum, and Lecture rooms of Natural Philosophy. The Laboratories of Chemistry and of Practical Physiology with the Museums of Geology and Mineralogy and of Gynæcology, which are described under the departments to which they belong, and various Lecture rooms occupy the rest of the main buildings The Anatomical School is situated in the north-west corner of the grounds. The Botanical Gardens, the cricket and football fields, the tennis and racquet courts are in the grounds surrounding the principal Building, as are also the Meteorological instruments, which are in charge of one of the College officers. The majority of the students reside during term in Salthill, which lies on Galway Bay, about a mile distant from the College.

(1) LECTURE COURSES.

(*a*) *Second Year's Course for Pass and Honours. Inorganic Chemistry.*—The class meets at 12 o'clock on Mondays, Wednesdays, and Fridays throughout the Session, but attendance is not required on Wednesdays, between the Christmas

recess and the close of Medical Lectures. The Lectures embrace a consideration of the leading facts of Inorganic Chemistry, and include both the Pass and Honour subjects required for the Second University Examination in Arts of the Royal University, or for other corresponding Examinations.

About forty Lectures are devoted to a detailed study of the non-metallic elements, their reactions, and the constitution of the compounds they form. The remaining Lectures embrace a review of the general facts established, including the weight and volume relation in chemical reactions, the molecular hypothesis, the atomic hypothesis, the relative weight of molecules and atoms, and the periodic law. The leading metals and their more important compounds are also briefly considered.

II.—CHEMISTRY.

(1) LECTURE COURSE.

First Year's Course for Pass and Honours. Inorganic and Organic Chemistry.—The class meets at 12 o'clock on Mondays, Wednesdays, and Fridays throughout the Medical Session.

---

* For further information as to the arrangements for clinical teaching (which are liable to alteration) application should be made to Professor Pye, Hon. Sec. of Medical Staff of Galway Hospital.

The Lectures embrace a consideration of the leading facts of Inorganic and Organic Chemistry, and include both the Pass and Honour subjects required for the First Examination in Medicine of the Royal University, or for other corresponding Examinations.

About forty Lectures are devoted to a detailed study of the non-metallic elements, their reactions, and the constitution of the compounds they form. The general facts established are then reviewed, including the weight and volume relation in chemical reactions, the molecular hypothesis, the atomic hypothesis, the relative weight of molecules and atoms, and the periodic law. The leading metals and their more important compounds are briefly considered, and the remaining Lectures are devoted to Elementary Organic Chemistry, embracing the general methods of study of organic compounds, their identification, qualitative and quantitative analysis, the constitution of molecules, isomerism, and including the reactions of the chief members of the fatty and aromatic groups.

(2) LABORATORY COURSES, PRACTICAL CHEMISTRY.

Second Year's Course for Pass.—This course consists of about forty Lectures of two hours each, commencing early in the first term, and ending at the close of the second term. The class works from 3 to 5 o'clock on Mondays, Wednesdays, and Fridays. The experiments are adapted to the requirements of the Pass Second Examination in Medicine of the Royal University, and of other corresponding Examinations. A *Second Year's Course for Honours*, adapted to the Honour Second Examination in Medicine of the Royal University, will be arranged for Students who desire it.

(3) TEXT-BOOKS.

V.—ANATOMY AND PHYSIOLOGY.

A. The Course laid down for Students in ANATOMY comprises :—

(*a*) *Descriptive Anatomy.*—A Course of Systematic Lectures on the Human Body. In the First Term, Osteology and Arthrology are taken up, and special attention is paid to the cultivation of a power of accurate observation and precise description.

Later on, more attention is gradually directed to the Topographic Anatomy of regions that are of medical or surgical importance.

The dissections for these Lectures are made by Prosectors appointed from amongst the best Students.

Casts, plates, and permanent dissections are used, sparingly at first, to a larger extent towards the end of the Course.

(*b*) *Dissections*, made by each Student independently, under the supervision of the Professor and Demonstrator. The Students are advised to learn Topographic Anatomy by means of a series of mental pictures; and, in order to secure vivid pictures, it is pointed out that careful and methodical dissections must be made.

The results of dissections are compared with the special information obtained by frozen sections, as well as with surface Anatomy of the living body, and the knowledge of its deeper organs obtained by auscultation and percussion.

B. In PHYSIOLOGY three Classes are formed:—Junior, Senior, and Practical.

To the *Junior Class* Lectures are delivered on the Histology and functions of the tissues, and of the organs of vegetable life, to which is added a special account of the structure and functions of muscle and nerve.

In the *Senior Class* the highest animal functions are taken first, beginning with a study of the nervous system and organs of sense.

The great facts of Physiology are studied by an examination of the original evidence, and, when practicable, by a repetition of the experiments that establish them.

For this purpose special portions of Physiology are taken each year.

The *Practical Class* meets in the second and third terms, on three days weekly. Each meeting occupies two hours. A separate table in the Laboratory is provided for each Student. In succession the Students undertake:—

I. PRACTICAL HISTOLOGY.—A Microscope and accessories are at the disposal of each Student.

> About 60 preparations of the tissues and organs are made, which become the property of the preparer.

II. PRACTICAL EXPERIMENTAL PHYSIOLOGY.—The phenomena of muscle and nerve, of circulation and respiration, and of the sense organs, are studied experimentally.

III. PRACTICAL CHEMICAL PHYSIOLOGY.—Analysis of the various animal substances and fluids referred to in the General Course of Lectures are made by each Student, special attention being paid to work that is important from a clinical point of view.

A dark room for photographic work and for the use of the Laryngoscope and Ophthalmoscope is in readiness.

The *Laboratory* contains an excellent collection of instruments used in physiological work.

MUSEUM.

To the Physiological Department is attached the Museum of Human and Comparative Anatomy. The preparations in this Museum are arranged in physiological series according to functions of organs.

They form a valuable addition to the teaching facilities in Physiology ; enabling the Professor to illustrate his Lecture by extended references to Comparative Physiology.

This Museum was founded by the late Dr. CROKER KING, some time Professor of Anatomy and Physiology in this College, afterwards Medical Commissioner of the Local Government Board. It was remodelled and enlarged by his successor in the Chair, PROFESSOR CLELAND, F.R.S., now Professor of Anatomy in the University of Glasgow. To Professor Cleland the College is indebted for many valuable specimens which form a permanent record of his work here.

VI.—PRACTICE OF MEDICINE.

Six Months' Course.

On Tuesdays, Thursdays, and Saturdays, at 2 o'clock. The Course is divided into two parts. The first comprises a general introduction to the study of Medicine, and a series of Lectures on the classification of diseases ; the general principles of ætiology, semeiology, diagnosis, and therapeusis ; the method of clinical examinations ; body temperature, and pulse in disease, and kindred subjects.

In the second and longer portion, the specific infections and constitutional diseases, and the diseases of the various systems and organs of the body, are taken up in regular order. The morbid anatomy and pathology, the symptoms, course, duration, and treatment are reviewed ; and in addition, the causation, complications, and sequelæ, prognosis, vital statistics, differential diagnosis, prophylaxis, &c., receive attention.

The Lectures are illustrated by pathological preparations— both macroscopic and microscopic—apparatus, instruments, drawings, &c. ; and the Professor, being one of the Physicians to the Galway Hospital, has an excellent opportunity of demonstrating to the Class the facts and methods treated of in the Lectures.

Examinations are frequently held during the Session, and by this means attention is paid to the progress of each member of the Class.

VII.—SURGERY.

The Surgical Lectures are delivered by the Professor of Surgery, at the College, on three days each week during the Session.

During the *First Term*, inflammation, general Surgical diseases, theory of treatment of wounds, &c., furnish the subjects of the Lectures. The class-books recommended are "Walsham's Surgery," "Erichsen's Surgery," and "Green's Pathology."

Early in the *Second Term*, fractures and dislocations form the subject of the Lectures, where much assistance is given by dry specimens of bones, both normal and abnormal.

Special injuries and surgical diseases form the subjects of Lecture during the remainder of the Session.

Treves' System of Surgery and Cassell's Clinical Manuals in connection with the subjects of the Lectures are recommended.

Surgical instruments are shown in connection with the Lectures, so as to give the Students the opportunity of learning the special use of each instrument.

At the termination of the Session an Examination is held, the questions being taken from different portions of the Course, and prizes given for high answering.

VIII.—MATERIA MEDICA.

Lectures are delivered at 2 P.M. on Tuesdays, Thursdays, and Saturdays. The Course comprises a study of the Drugs, organic and inorganic, of the British Pharmacopœia, and a review of the more important Drugs that are not officinal.

The earlier Lectures include a study of :—

1. The general method of classifying drugs.
2. The sources and natural conditions of medicines.
3. The selection and collection of medicines.
4. The active principles of medicines derived from the vegetable kingdom.
5. The modes of administration of drugs.
6. The several circumstances that influence the action of drugs in the system.
7. Prescription reading and prescription writing.

Several Lectures are next devoted to a critical study of the Official Pharmacopœia.

The succeeding Lectures include the study of individual drugs, organic and inorganic, according to a pre-arranged therapeutical grouping, and after the following method:—Source (geographical, botanical); characters and tests; impurities and incompatibilities; preparations and doses; therapeutic value.

At the commencement of each Lecture the Class are examined on the previous day's work.

THE MUSEUM is enlarged and replenished from year to year, so that the drugs exhibited may be as fresh and characteristic as possible, and contains a complete set of the official drugs, and an extensive collection of drugs not official. These are exhibited to Students during Lecture, and ample opportunity is given them to investigate the physical properties and characteristic appearance of each specimen.

I.—MATHEMATICS.

The Courses in Mathematics in the School of Civil Engineering coincide in a great measure with those in the Faculty of Arts (see p. 178), but are slightly more extensive.

In particular, the Pass Course for the First Year includes the elements of Solid Geometry and the use of Logarithmic and Trigonometrical Tables.

The Pass Course for the Second Year includes the elements of the Differential and Integral Calculus.

On the other hand, the Theory of Equations, and the methods of Polar and Trilinear Co-ordinates do not form part of the Course in this School.

When no other arrangements are made, the Lectures on the above additional subjects to Honour Students in the Faculty of Arts are open to Pass Engineering Students.

The Library contains books of Mathematical Tables which will be useful to those who wish for practice in computation.

II.—NATURAL PHILOSOPHY.

(For Courses see Faculty of Arts, p. 179.)

III.—CHEMISTRY.

(1) LECTURE COURSE.

First Year's Course for Pass and Honours. Inorganic Chemistry.—The class attends the Lectures given to Students of the Faculty of Arts at 12 o'clock on Mondays, Wednesdays, and Fridays throughout the Session. Their execution there was strictly just, and was a penalty which any military commander would be justified in exact ing for a similar offence against the laws of honour. Bu although the justice of the general's sentence may be estab lished, it may yet be asked whether there was any neces sity for exacting the full penalty, and whether this was no a case for a display of generosity on the part of the con queror. It may safely be answered that never was there a time when one or two severe examples were more urgently called for : and when, however much soever the genera might wish to show mercy, he was never bound to perforn what to him must have been a very painful duty.

COMPOSITION.

1. Translate into French :—

Our life might be gay and happy if we would ; but we eagerly seek subjects of affliction to render it melancholy. We pass the first years of this life in the shades of ignorance, the succeeding ones in pain and labour, the latter part in grief and remorse, and the whole in error ; nor do we suffer ourselves to possess one bright day without a cloud.

Let us examine this matter with sincerity, and we shall agree that our distresses chiefly arise from ourselves. It is virtue alone which can render us superior to Fortune; we quit her standard, and the combat is no longer equal. Fortune mocks us ; she turns us on her wheel : she raises and abases us at her pleasure, but her power is founded on

our weakness. This is an old-rooted evil, but it is not incurable : there is nothing a firm and elevated mind cannot accomplish. The discourse of the wise and the study of good books are the best remedies I know of ; but to these we must join the consent of the soul, without which the best advice will be useless.—PETRARCH.

LE LEVER DU SOLEIL.

On le voit s'annoncer de loin par les traits de feu qu'il lance au-devant de lui. L'incendie augmente, l'orient parait tout en flammes : à leur éclat on attend l'astre long-temps avant qu'il se montre ; à chaque instant on croit le voir paraître : on le voit enfin. Un point brillant part comme un éclair, et remplit aussitôt tout l'espace ; le voile des ténèbres s'efface et tombe; l'homme reconnaît son séjour, et le trouve embelli. La verdure a pris, durant la nuit, une vigueur nouvelle ; le jour naissant qui l'éclaire, les premiers rayons qui la dorent la montrent couverte d'un brillant réseau de rosée, qui réfléchit à l'œil la lumière et les couleurs. Les oiseaux en chœur se réunissent et saluent de concert le père de la vie : en ce moment pas un seul ne se tait. Leur gazouillement, faible encore, est plus lent et plus doux que dans le reste de la journée ; il se sent de la langueur d'un paisible réveil. —JEAN JACQUES ROUSSEAU.

COMPOSITION.

1. Translate into German :—

Frederic's education had been entirely French. The long ascendancy which Louis XIV. had enjoyed, and the eminent merit of the tragic and comic dramatists, of the satirists, and of the preachers who had flourished under that magnificent prince, had made the French language predominant in Europe. Germany had not yet produced a single masterpiece of poetry or eloquence. In Germany, therefore, the French taste reigned without rival and without limit. Every youth of rank was taught to speak and write French. That he should speak and write his own tongue with politeness, or even with accuracy and facility, was regarded as comparatively an unimportant object. Even Frederic William, with all his rugged Saxon prejudices, thought it necessary that his children should know French, and quite unnecessary that they should be well versed in German. The Latin was positively interdicted. ' My son,' his Majesty wrote, ' shall not learn Latin ; and, more than that, I will not suffer anybody even to mention such a thing to me.'—MACAULAY, *Frederic the Great.*

Knowledge is mental food, and is exactly to the spirit
what food is to the body (except that the spirit needs several
sorts of food, of which knowledge is only one), and it is
liable to the same kind of misuses. It may be mixed and
disguised by art, till it becomes unwholesome; it may be
refined, sweetened, and made palatable, until it has lost all
its power of nourishment; and, even of its best kind, it may
be eaten to surfeiting, and minister to disease and death.

Idioms.

5. Give idiomatic Irish for :—

(*a*) I will make him sing another tune.

(*b*) They laid on me with their fists.

(*c*) Let us take shelter.

(*d*) What has happened to you ?

(*e*) People meet, if hills don't.

6. Give the English of :—

(*a*) Aicniġċeaɼ an cɼann aɼ a ċoɼaḃ.

Grammar.

7. Distinguish between the meanings of—(*a*) leaḃaɼ liom ; (*b*) mo leaḃaɼ ; (*c*) mo leaḃaɼ ɼé́in, and (*d*) mo leaḃaɼ-ɼa.

8. Give the third person singular of the present, preterite, and future indicative mood, of the following verbs—(*a*) beiɼ ; (*b*) caḃaiɼ ; (*c*) ɼeic ; (*d*) té́iḃ ; (*e*) ɼaɹ :—

      (A) when used independently ;

      (B) when preceded by ní.

9. Give the passive forms, in the same tenses, of the verbs named in the foregoing question —

      (A) when used independently ;

      (B) when preceded by ní.

10. In Irish, verbs which are not transitive are frequently used in the passive voice. Give examples showing the following verbs in this usage :—(*a*) bí ; (*b*) caɼ ; (*c*) ɼéaḃaim ; (*d*) caiċɼiḃ, in the sense of ' must.'

2. The present worth of £119 15*s.* 3*d.* due three months hence is £119 3*s.* 4*d.* : what is the rate per cent. per annum ?

3. A man sells £6100 India 3 per Cent. Stock at 101$\frac{3}{8}$, and with the proceeds buys G. S. and W. 4 per Cent. Preference Stock at 137$\frac{1}{4}$. Find the change in his income, allowing $\frac{1}{8}$ brokerage.

4. Prove that when $n + 1$ figures out of $2n + 1$ in the square root of a square integer have been found by the ordinary process, the rest may be found by mere division.

Find the 4th root of 2 correct to 4 places of decimals.

5. Solve the equations
$$8x + 3y + 2z = 48,$$
$$7x + 4y - z = 42,$$
$$x^2 + y^2 + z^2 = 36.$$

6. Find two progressions, one arithmetical and one harmonical, such that the first and seventh terms shall be the same in both, and the third term in the one shall be equal to the fifth in the other.

7. Given $a + \beta = a$, $a\beta = b$, find $a^6 + \beta^6$.

8. Show that, in an expansion by the binomial theorem, the ratio of the $r + 1^{th}$ term to the rth continually decreases as r increases, and prove that if m, n are positive integers, of which n is the greater, then
$$\left(1 + \frac{1}{n}\right)^m < \frac{n}{n - m}.$$

9. There are nr things of n kinds, r of each kind. Show that the number of permutations of them s together is the coefficient of x^s in

4. Given the nine-point circle of a triangle and its angles, construct it.

5. A curvilinear triangle is contained by arcs of three circles, no part of which lies within the triangle. Prove that the sum of its three angles is less or greater than two right angles according as a real circle can or cannot be drawn to cut the three circles orthogonally.

6. Find to three places of decimals the sine and cosine of 48°.

7. Prove that

$$\frac{\sin^3 \alpha}{\sin (\alpha - \beta) \sin (\alpha - \gamma)} + \frac{\sin^3 \beta}{\sin (\beta - \gamma) \sin (\beta - \alpha)} + \frac{\sin^3 \gamma}{\sin (\gamma - \alpha) \sin (\gamma - \beta)} = \sin (\alpha + \beta + \gamma).$$

8. The distances of the vertices of an acute-angled triangle from its orthocentre are 12, 9, 2. Prove that the radius of the circumcircle is 8, and find the sides.

9. The medians of a triangle ABC meet the circumcircle again in A', B', C'. Find the area of the triangle $A'B'C'$.

and

$$\sin (\beta + \delta) + \sin (\delta + \alpha) + \sin (\alpha + \beta) = 0,$$

prove that, unless α, β have special values,

$$\sin (\gamma + \delta) + \sin (\delta + \alpha) + \sin (\alpha + \gamma) = 0,$$

and that $\alpha + \beta + \gamma + \delta$ is an odd multiple of π.

Haec homo ingeniosissimus, M. Cato, auctoribus eruditissimis inductus adripuit, neque disputandi causa, ut magna pars, sed ita vivendi. Petunt aliquid publicani : cave quidquam habeat momenti gratia. Supplices aliqui veniunt miseri et calamitosi : sceleratus et nefarius fueris, si quidquam misericordia adductus feceris. Fatetur aliquis se peccasse et eius delicti veniam petit : nefarium est facinus ignoscere. At leve delictum est : omnia peccata sunt paria. Dixisti quippiam : fixum et statutum est. Non re ductus es, sed opinione : sapiens nihil opinatur. Errasti aliqua in re : male dici putat. Hac ex disciplina nobis illa sunt. Dixi in senatu me nomen consularis candidati delaturum. Iratus dixisti. Numquam, inquit, sapiens irascitur. At temporis causa. Improbi, inquit, hominis est mendacio fallere : mutare sententiam turpe est : exorari scelus, misereri flagitium.—CICERO, *Pro Murena*, xxx. 2.

Etenim eiusdem animi atque ingenii est posteris suis, quod Pompeius fecit, amplitudinem nominis, quam non acceperit, tradere, et, ut Scaurus, memoriam prope intermortuam generis sui virtute renovare.

Quamquam ego iam putabam, iudices, multis viris fortibus ne ignobilitas obiiceretur generis, meo labore esse perfectum, qui non modo Curiis, Catonibus, Pompeiis, antiquis illis, fortissimis viris, novis hominibus, sed his recentibus, Mariis et Didiis et Caeliis, commemorandis iacebant.—*Ib.* vii. 16.

COMPOSITION.

Render into Greek prose the following :—

The literary education of a Spartan was of a most restricted kind. He was taught to despise literature as unworthy of a warrior, while the study of eloquence and philosophy, which were cultivated at Athens with extraordinary success, was regarded at Sparta with contempt. Long speeches were a Spartan's abhorrence, and he was trained to express himself with sententious brevity.

A Spartan was not considered to have reached the full age of manhood till he had completed his thirtieth year. He was then allowed to marry, to take part in the public assembly, and was eligible to the offices of the State. But he still continued under public discipline, and it was not until he had reached his sixtieth year that he was released from the public discipline and from military service.

COMPOSITION.

1. Translate into French :—

It has been said that the Tudors were as absolute as the Cæsars. Never was parallel so unfortunate. The government of the Tudors was the direct opposite to the government of Augustus and his successors. The Cæsars ruled despotically, by means of a great standing army, under the decent forms of a republican constitution. They called themselves citizens. They mixed unceremoniously with other citizens. In theory they were only the elective magistrates of a free commonwealth. Instead of arrogating to themselves despotic power, they acknowledged allegiance to the senate. They were merely the lieutenants of that venerable body. They mixed in debate. They even appeared as advocates before the courts of law. Yet

they could safely indulge in the wildest freaks of cruelty and rapacity, while their legions remained faithful. Our Tudors, on the other hand, under the titles and forms of monarchical supremacy, were essentially popular magistrates. They had no means of protecting themselves against the public hatred ; and they were therefore compelled to court the public favour. To enjoy all the state and all the personal indulgences of absolute power, to be adored with Oriental prostrations, to dispose at will of the liberty and even of the life of ministers and courtiers, this the nation granted to the Tudors. But the condition on which they were suffered to be the tyrants of Whitehall was that they should be the mild and paternal sovereigns of England. —MACAULAY, *Burleigh and his Times.*

COMPOSITION.

1. Translate into German :—

The Girondists were the philosophers of the Revolution. Their ideas were often grand and generous, drawn from the heroes of Greece and Rome, or the more enlarged philanthropy of modern times ; their language ever indulgent and seducing to the people ; their principles those which gave its early popularity and its immense celebrity to the Revolution. But they judged of mankind by a false standard ; their ruinous error consisted in supposing that the multitude could be regulated by the motives which influenced the austere patriots, whom they numbered among their own body. An abstract sense of justice, a passion for general equality, a repugnance for violent governments, distinguished their speeches ; but yet from their innovations has sprung the most oppressive tyranny

of modern times, and they were at last found joining
many measures of the most flagrant iniquity. The drea
ful war which ravaged Europe for twenty years was pr
voked by their declamations. The radical and inhere
vice of this party was their irreligion ; and the dreadl
misfortunes in which they involved their country, prov
how inadequate the most splendid talents are to t
management of human affairs, or the right of social dut
without that overruling principle. With all their lo
of justice they declared Louis guilty : with all the
humanity, they voted for his death.—A. ALISON.

2. Write, in German prose, any of the prescribed poer

3. Oral examinations on the authors prescribed.

In the interval between his campaigns Agricola was
employed in the great labours of peace. He knew that the
general must be perfected by the legislator, and that the
conquest is neither permanent nor honourable which is
only an introduction to tyranny. His first care was the
regulation of his household, which, under former legates,
had always been full of faction and intrigue, lay heavy on
the province, and was as difficult to govern. He never
suffered his private partialities to intrude into the conduct
of public business ; nor in appointing to employments did
he permit solicitation to supply the place of merit, wisely
sensible that in a proper choice of officers is almost the
whole of government.—MERIVALE.

5. Render into Greek :—

The separate advantage of an Oligarchy consists in the wisdom which may be expected from experience and education. A permanent council naturally possesses experience, and the members who succeed to their places in it by inheritance will probably be trained and educated with a view to the stations which they are destined by their birth to occupy.

The evils of an Oligarchy are dissensions in the ruling orders of the State, which, from the want of a common superior, are liable to proceed to the most desperate extremities ; oppression of the lower orders by the privileges of the higher, and by laws partial to the separate interests of the law-makers.

Notwithstanding the vastness of the stage on which M. de Tallyrand acted, and the importance of the parts which, for more than half a century, he played, I venture to doubt whether his character has ever been fairly given, or is at this moment justly appreciated ; nor is this altogether surprising. In a life so long, brilliant, and varied, we must expect to find a diversity of impressions succeeding and effacing each other ; and not a few who admired the captivating companion, and reverenced the skilful minister of foreign affairs, were ignorant that the celebrated wit and sagacious diplomatist had exhibited an exquisite taste in letters, and a profound knowledge in legislation and finance. COMPOSITION.

Render into Greek :—

The separate advantage of an Oligarchy consists in the wisdom which may be expected from experience and education. A permanent council naturally possesses experience, and the members who succeed to their places in it by inheritance will probably be trained and educated with a view to the stations which they are destined by their birth to occupy.

The evils of an Oligarchy are dissensions in the ruling orders of the State, which, from the want of a common superior, are liable to proceed to the most desperate extremities; oppression of the lower orders by the privileges of the higher, and by laws partial to the separate interests of the law-makers.

Pray tell me, what is the meaning of all this ? What is happening ? To me it is all as dark as night. 'We have lost Ancona, but still hold Cingulum. Labienus has deserted Caesar's standard.' Why, are we talking of a Roman General, or of a Hannibal ? Oh ! mad and pitiable man ! who has never seen even in a faint reflection, '*splendorem pulcritudinemque virtutis.*' And yet he says he is doing all this 'for the sake of his honour.' Why, how can honour exist without honourable life ? Is it 'honourable' then to retain your army without the lawful authority—to capture the towns of your fellow-countrymen, in order to clear the road to the city that gave you birth, to be plotting your '*table rasé de dettes,*' your '*rentrée des émigrés,*' and countless other nefarious watchwords for the sake of empire :—

THÈME.

1. Traduisez en français :—

We have hitherto only adverted to the sufferings of those who are engaged in the profession of arms, without taking into our account the situation of the countries which are the scene of hostilities. How dreadful to hold everything at the mercy of an enemy, and to receive life itself as a boon dependent on the sword. How boundless the fears which such a situation must inspire, where the issues of life and death are determined by no known laws, principles, or customs, and no conception can be formed of our destiny except as far as it is dimly deciphered in characters of blood, in the dictates of revenge, and the caprices of power. Conceive, but for a moment, the consternation which the approach of an invading army would impress on the peaceful villages in this neighbourhood. When you have placed yourself for an instant in that situation, you will learn to sympathise with those unhappy countries which have sustained the ravages of arms. But how is it possible to give you an idea of these horrors? Here you behold rich harvests, the bounty of Heaven and the reward of industry, consumed in a moment, or trampled under foot, while famine and pestilence follow the steps of desolation. There the cottages of peasants given up to the flames, mothers expiring through fear, not for themselves but for their infants; the inhabitants flying with their helpless babes in all directions, miserable fugitives on their native soil.

COMPOSITION.

1. Translate into German :—

Under the title of this paper, I do not think it foreign to my design to speak of a man born in her majesty's dominions, and relate an adventure in his life so uncommon, that it is doubtful whether the like has happened to any other of the human race. The person I speak of is Alexander Selkirk, whose name is familiar to men of curiosity, from the fame of his having lived four years and four months alone in the island of Juan Fernandez. I had the pleasure, frequently, to converse with the man soon after his arrival in England, in the year 1711. It was a matter of great curiosity to hear him, as he is a man of good sense, give an account of the different revolutions in his own mind in that long solitude. When we consider how painful absence from company, for the space of but one evening, is to the generality of mankind, we may have a sense how

painful this necessary and constant solitude was to a man bred a sailor, and ever accustomed to enjoy, and suffer, eat, drink, and sleep, and perform all offices of life in fellowship and company. He was put ashore from a leaky vessel, with the captain of which he had an irreconcilable difference ; and he chose rather to take his fate in this place, than in a crazy vessel, under a disagreeable commander. His portion was a sea-chest, his wearing-clothes and bedding, a pound of gunpowder, a large quantity of bullets, a few pounds of tobacco, a hatchet, a knife, a Bible, and other books of devotion.

5. What letters are found in H. G. for the Aryan as well as the L. G. *b, p, ph,* and *f* ? Give examples.

It is impossible to defend Nicias in his dispute with Cleon about the expedition to Pylus. Nevertheless, the conduct of Nicias was in accordance with his principles, and a large party in the assembly undoubtedly believed him to be in the right. In the first place he was exasperated that an opportunity of ending the war on favourable terms had just been lost through Cleon's fault. For the Lacedemonians had sent envoys to Athens to propose peace ; but owing to the extravagant demands made to them on Cleon's proposal, they had returned to Pylus without success.

II.

It is impossible to deny that monarchies have, generally speaking, been warlike, and given to conquest. Whoever is entrusted with much power is apt to desire more ; he who is strong at home is naturally wishful to show his influence abroad. Kings whose dominions are large are prone to regard the maintenance of a military force as the chief good incident to their lot ; and as they have always the pretext of maintaining their own power at home, or what they call preserving the peace of society, so they easily put themselves in a condition to extend their power among their neighbours, or, as they term it, to make their nation respected abroad.

After the battle the outcry against him became furious. He was accused, perhaps unjustly, of having said with unfeeling levity, while the English regiments were contending desperately against great odds, that he was curious to see how the bulldogs would come off. Would anybody, it was asked, now pretend that it was on account of his superior skill and experience that he had been put over the heads of so many English officers ? It was the fashion to say that those officers had never seen war on a large scale. But surely the merest novice was competent to do all that Solmes had done, to misunderstand orders, to send cavalry

on duty which none but infantry could perform, and to look on at a safe distance while brave men were cut to pieces. It was too much to be at once insulted and sacrificed, excluded from the honours of war, yet pushed on all its extreme dangers, sneered at as raw recruits, and then left to cope unsupported with the finest body of veterans in the world. Such were the complaints of the English army : and they were echoed by the English nation.—MACAULAY.
